

Buckeye Bulletin

April 2020

**Social Gathering:
CANCELLED**
Due to COVID19
Stay home... Stay safe!

Filled to the **GILLS** with fry!

Welcome to the Buckeye Bulletin...

As you turn these pages, you enter the digital archives of the Ohio Cichlid Association. Take a look around and please enjoy.

Monthly Features include:

**President's Message
Editor's Message
Bowl Show Results
Cichlid BAP Results
Catfish BAP Results
Program Previews
Extravaganza Show Results!**

Special thanks to
Kevin Bauman
for the cover picture.
It is a BEAUTIFUL
Labidochromis "Hongi"

And more...

As a member, you are more than welcome to submit pieces for publication in the bulletin. Please contact buckeyebulletin@gmail.com

If you are interested in all things "exchange," please contact Exchange Editor, Lew Carbone!

The Fine Print:

The Ohio Cichlid Associations Buckeye Bulletin is produced monthly by the Ohio Cichlid Association. All articles and photographs contained within this publication are being used with consent of the authors.

When submitting articles for publication in this bulletin, please remember to include any photographs or art for the article. The Ohio Cichlid Association is not responsible for any fact checking or spelling correction in submitted material. Articles will be edited for space and content. All information in this bulletin is for the sole use of The Ohio Cichlid Association and the personal use of its members. Articles, photographs, illustrations, and any other printed material may not be used in any way without the written consent of The Ohio Cichlid Association.

Meet Your 2020 OCA Board...

President: Lew Carbone

Treasurer: Sherry Olszowski

Programs: Lew Carbone

Temp. Bulletin Editor: Jon Dietrich

Cichlid BAP: Mark Chaloupka

Bowl Show: Ron Maichle

Extravaganza: Duties Shared

Photographer:

Historian: Scott Myers

Raffles: Carl Olszewski

Club Liaison: Lew Carbone

Manufacturer Liaison: Gary Mendez

At Large (Elected):

Marilyn Danko
Samantha Fletcher

Vice President: Gary Mendez

Secretary: Jon "Jombie" Dietrich

Membership: Hilary Lacerda

Webmaster: Gary Mendez

Catfish BAP: Steve Heinbaugh

Apparel: Ron Maichle

Auctions: Lew Carbone

Videographer:

Librarian: Hilary Lacerda

Refreshments: Sherry and Carl Olszewski

Jim Smith Fund: Lew Carbone

Promotions: Don Danko

At Large:

Jeff Natterer

If you would like to be a part of the OCA Board, please speak to a Board member for more information!

The OCA Mission Statement...

The OCA is an organization dedicated to the advancement and dissemination of information relating to all aspects of the biology of cichlids and related aquatic life. Our purpose is to promote the interest, keeping, study, breeding, and the educational exhibition of Cichlids. Additionally, the exchange of ideas, meeting new people, and distribution of information concerning Cichlids is of primary interest.

There are many ways to get involved with the club!

Attend Meetings
Contribute to the Buckeye Bulletin
Participate in the monthly Bowl Show
Volunteer to “run” at an auction
Persuade non-members to attend a meeting
Attend the Extravaganza
Participate in the Breeder Awards Program
Enter fish into an auction
Join the Board – elections are held in December
Like/Share an OCA Facebook post
Post a thread on the OCA Forum
Visit Ohiocichlid.com

Get involved in all things OCA!

A Word from the President...

Lew Carbone,
OCA President

As the Monty Python catch-line went, "Now, for something completely different."

As you have probably heard, our April meeting, along with just about any gathering one can think of for the near future, has been cancelled. At first, after the governor's announcement about school closings and recommendation for the cancellation of any gathering of more than 100, I thought we would still be having our meeting, as our attendance is usually 40-60. However, our venue, the Middleburg Heights Community Center, is owned and administered by the city of Middleburg Heights, so what I thought made no difference whatsoever. Upon further reflection, many of our potential attendees would have probably been justifiably wary of an event with even that many people, so I suppose it wouldn't have been a good idea anyway.

We are working on plans for this year's Extravaganza, and we hope to have an announcement about it by this time next month. Nobody knows how long these precautions related to COVID-19 will go on, but unless and until it becomes apparent that our string of consecutive Extravaganza will be halted at 25, we will continue planning. (What an unpleasant thought!)

Unusual circumstances beget unusual results, so this bulletin will have two articles by OCA board members! Don Danko will share with us his drama with snail infestation, and our Buckeye Bulletin editor, Jonathan "Jombi" Dietrich will give us a report on his fish room. Many of you are now enjoying some extra time (even if for unenjoyable reasons), so **maybe you can write an article for a future bulletin!** If you think you have a story to tell, but you think you're not a good enough writer, do it anyway. Jombi or I will have absolutely no problem editing it into something you can be proud of, and we won't let on that we edited it! I even enjoy doing it, so don't be shy. Put something in a word document, attach it to an email, and send it to buckeyebulletin@gmail.com. Heck, you could just put it in the body of the email, if you want!

Concerning future meetings, we, of course can't predict what's going to happen. Rich Bierbower, our scheduled April speaker, has agreed to visit us for the August meeting. Dr. Jay Stauffer, our scheduled May speaker, is currently in Africa, so I probably won't be communicating with him for a couple weeks. Maybe we'll be able to have a May meeting, and maybe we won't, but if we don't, I'll try to reschedule Dr. Stauffer for a meeting in the fall. For some of you, life may be going on almost as normal, and others, including me, are in somewhat of a nesting mode. Keep busy, do some of those things you can never seem to get time for (like writing an article), and keep yourself safe. If you feel that these restrictions are impinging on your freedom, remember that it's not just about your own health, but also the health of your family and community.

I hope to see everyone soon!
Lew

Bowl Show – April 2020

Listed below is information about the monthly meeting Bowl Show. The Bowl Show is your opportunity to show off your fish. Each month different categories of Cichlids and Catfish will be judged. Points will be given and prizes will be awarded. All members are welcome to participate. This is great practice for our yearly Extravaganza show!
See Ron Miachle, OCA Board, at a meeting for more information.

We had a total of five great entries for the March monthly meeting. The best of show could have gone to either class. Just remember that the field is wide open, so bring those fish to show. With the potential of missing of at least one meeting, the Bowl Show classes may change or expand each month so look to the monthly bulletin each monthly. Looking forward so that the bowl will remain competitive the monthly limit of six entries is has been suspended, and you now only need to months of entries to qualify for the grand prizes.

Don't forget the monthly awards are listed below, and you need to earn points in at least three two months to be eligible for the grand prize:

Monthly	Points awarded	Cash Prize
Best of Show*	5	\$15
First place, each class	10	\$10
Second place, each class	7	\$7
Third place, each class	3	\$5
Non-placing entry	1	\$0
*Will only be awarded if there are two or more entries		

Until next time, Ron

2020 OCA Monthly Bowl Show Competition Rules

The primary purpose of the bowl show is educational and practice for the annual Extravaganza. It enables members to see and examine different species of fish, it familiarizes members as to judging procedures. In addition to encouraging the showing and keeping of fish.

1. The Bowl Show Chairman, or designated appointee for a specific month, shall have complete charge of all entries. Any unusual requirements or exceptions or questions about these rules must be discussed with the chairperson.
2. All entries shall be in containers having at least 1 flat side (not including the bottom). Only one fish per container, unless a full divider is used then only one fish per section of the container. It's also a good idea to have some form of lid for your animal's protection.
3. All containers must be devoid of contents, except for water and fish. A background, outside of the container, is allowed. However, special lighting is not allowed.
4. A label (piece of paper) should be placed in front of each entry giving the scientific name and the class the fish is being entered. The owner's name (the person[s] receiving points) of the entry should be placed on the back of the label.
5. Only members in good standing and present at the monthly meeting may submit an entry.
6. No more than 6 entries may be submitted by any one member during a monthly show.
7. Entries must be owned by the person(s) submitting it for judging. In addition, the last permanent residence of the entry must be from an aquarium maintained by the owner(s).
8. The chairperson, from time to time, may ask for guest judges in helping to award points. However, the final decision to award any points is the responsibility of the chairperson.
9. Each month different categories, typically Cichlids and Catfish, will be judged. Checkout the most current listing for monthly classes.
10. Size restrictions refer to full-grown adult sizes as reported by Cichlid Room Companion or Planet Catfish.
11. A fish can be entered in only one of the available classes, each month.
12. Diseased, malformed, mutilated, hybrid specimens, or other reasonable grounds may be cause for disqualification of an entry. If an entry is disqualified, then all points and cash prizes accumulated for that month's show will be forfeit by the owner(s) that submitted the entry.
13. The decision of the chairperson is FINAL.
14. Monthly Point awards and cash prizes: (OCA to potentially award \$81, and 65 points to all placing entries, per month)

Monthly	Points awarded	Cash Prize
Best of Show*	5	\$15
First place, each class	10	\$10
Second place, each class	7	\$7
Third place, each class	3	\$5
Non-placing entry	1	\$0

*Will only be awarded if there are two or more entries

15. Yearly Point awards and prizes:
 1. Grand Prize for 2020: 75-gallon aquarium or cash equivalent. To qualify for the grand prize, you must have earned points in at least three separate monthly shows.
 2. A Certificate (or plaque) will be awarded to the OCA Bowl Show Champion (overall point leader for the year). To qualify for the certificate, you must have earned points in at least three separate monthly shows.
 3. Certificates may be awarded to the 1st runner-up in the yearly point totals. To qualify for a certificate, you must have earned points in at least three separate monthly shows and have at least half the total points as the overall point leader.
 4. For tie breakers, the number of monthly awards won will be utilized starting with Best of Show.

So, you have a snail problem?

By: Don Danko

At a time when many of us are sitting at home trying to keep our minds off of the dire times facing us at the moment, snails are likely the farthest subject from our minds. That said, writing about it is keeping my mind off the craziness for a little while!

If you're anything like me, snail infestations in your Cichlid aquariums drive you crazy! I've recently discovered a new approach to thinning out the slow moving herd that, after all these years in the hobby, I've never heard of before – Tanganyikan Shell Dwellers.

Unwanted snails can come into your tanks in different ways - on plants, in bags of new fish, from nets previously used in snail infested tanks, gravel, cups, buckets, hoses, etc. I've even wondered if they were contaminants from sun dried river shrimp I once purchased and fed to many fish.

Not only are snail infestations unsightly, they can be a source of arguments between fish keeping aquarist couples! You transferred them, no you did! Just stay out of my tanks!

Over the years, I've heard of many proposed solutions and have tried just about every one of them - at least twice. Following is a rundown of some of the more popular ones.

"Had-A-Snail" and other Snail Eradicators

This was a popular chemical formulation some years back. It was touted to be very effective in killing off unwanted snails, however, I never found it to work at all. Some other aquarists claimed it worked for them, however, others found that dead snails polluted the tank and then killed their fish. Hence, this product earned the nickname of "Had-A- Fish" in some quarters. Other formulations existed but were found to be just about the same.

Skunk Loaches

Loaches are often suggested when discussing snail problems with other aquarists and Skunk Loaches are very popular when it comes to suggestions. While I'm sure that they eat a snail or two, I've never seen a noticeable impact on my snail populations. I did run into a very serious downside to using them one time when I put a few in a 40 breeder with my prized *Corydoras gosseii*. I began to notice something that looked like mouth fungus on the *Corydoras* and a few days later, they began to die. What I later found out was that the *Botia* ripped the barbells off of the *Corydoras* and then a number of the cats subsequently died. So, tread lightly with loaches!

Bleach

Bleach is often suggested as the last resort after other methods have failed and it is touted as a sure-fire way to eradicate an unwanted snail infestation. I've tried it on a gravel infestation of live bearing trumpet snails. I put in more than twice the recommended dose and left the tank in the garage over the winter. Much to my chagrin, I was amazed to see live snails again after setting that tank back up!

Assassin Snails

I have found that these good looking snails are reasonably effective in slowing down a snail explosion. We currently keep them in a number of tanks. It can take time though as reproduction is slow. And, it never seems that they fully eradicate them. But, that's more than I can say about the other approaches! Some larger fish like *Triglachromis otostigma* and 'Lamprologus' callipterus males may actually eat the assassin snails, so be careful what you put them in with. At the going rate of \$1.00 each, they might be an expensive snack!

Prevention and the Power of Clean Water

Of course, prevention has always been the most effective approach for me though. Isolate your plants, nets, hoses, cups, pails, etc. and NEVER use them with tanks that have snails. Be extremely careful in adding new fish and plants especially.

Another preventive measure is keeping your tank water clean and not letting waste products build up. As an example of the power of clean water, one of my 125 gallon tanks was very heavily infested with nuisance snails. I had tried a number of approaches to reduce them and often went into the tank with a net to remove large numbers of them. Eventually, I realized that I had turned off a valve on my automatic water change system for that tank at some earlier point and had forgotten to turn it back on. I noted that the tank water no longer looked pristine and had begun to wonder if the waste materials building up were fueling the snail outbreak. So, I did a large water change and opened the valve and the water began to get very clean and clear once again. Now, I no longer see any snails in that tank.

'Lamprologus' callipterus really clean up unwanted snails in the aquarium.

A New Approach?

Over the past two years, I've been taking photos of a number of Shell Dwellers of the genera 'Lamprologus' and *Telmatochromis* for future talks on this interesting group of Tanganyika cichlids. Most of my existing pics are in the form of 35mm slides from the film era and I'd like to replace them with high resolution digital images that are much sharper. So far, I've located 'Lamprologus' *brevis* "Mtoto Tiger", *gold ocellatus*, *stappersi* (aka *meleagris*), *Zambian ornatipinnis*, *callipterus*, *multifasciatus*, *similis*, as well as *Telmatochromis temporalis* "Shell". In keeping them, I've noticed a very pleasant and unexpected surprise – they all seem to eat small snails! I've noticed piles of empty nuisance snail shells around the *Neothauma* and other shells that the pairs and individuals have taken for their territories. While they all seem to be somewhat effective, by far the most prolific snail eater is 'Lamprologus' *callipterus*. This effectiveness is most likely the result of the males growing significantly larger than males of the other species mentioned.

I like really keeping shell dwellers due to their small size, ease in managing aggression and popularity with other hobbyists. Now the snail reduction feature is something I add to the list of benefits when I give talks on this species group. If you have some snails to eradicate, you just might want to give them a try!

Welcome To My Fish Room

A Fish Tour Through Jombie's Tanks

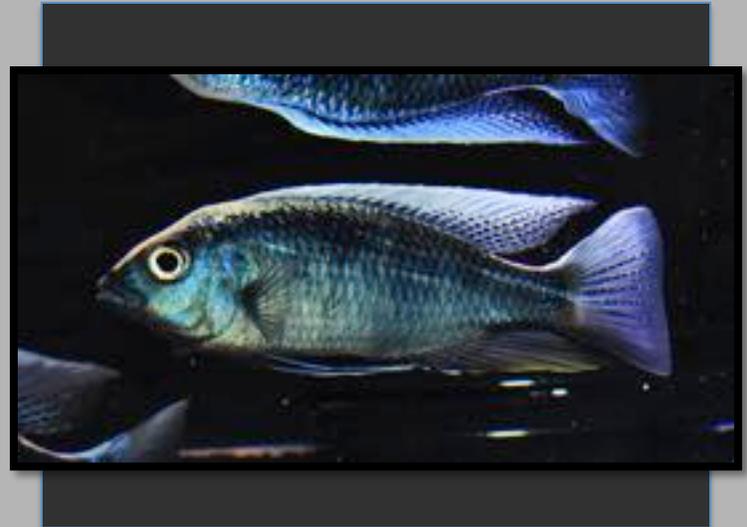

Coptodon kottae

I obtained this species from Jeff Walker at the OCA Extravaganza. He donated a bunch of fry for my fish tank at the school. This is a spectacular West African cichlid that is on the CARES List. The kottae quickly grew from a boring, colorless fry to stunners in only a few months. Males colored up first and females followed with the same intensity. These guys are golden yellow with a pitch-black throat. Most of mine developed a red blush in the gills when mating. I had to thin the tank as there were about four breeding pairs in a 40 gallon. During to COVID19, there are currently 2 pairs residing in the school fish tank in my basement. I implore everyone to try these out.

Copadichromis chrysonatus

Here's the first on this list obtained by the one and only, Josh Cunningham. Josh's reputation is well deserved in each fry that's taken out of his fish room. These blue beauties are currently in one of my 125 gallon tanks. There are three males and three females. I often imagine what these fish look like in the wild. Blue blazes of color swimming in the open Malawian waters. Truly amazing! I love their enormous eyes too. Although, I have not been able to harvest fry, I'm not too worried as I don't plan on parting with this species anytime soon.

Aulonocara maylandi

Lurking in the lower niche of this Malawian 125 gallon is this young group of Peacocks. These maylandi are just starting to color up and one female has held already. The yellow blaze on the dominant male's forehead is striking. I've been relatively new at keeping peacocks. I usually try to have one species in my fish room at a time, but at the end of the OCA Winter auction, I couldn't let the multiple bags of maylandi go without raising my hand. I'm a sucker for a CARES fish. If we have the room to do our part, I think it's our obligation to do it.

Welcome To My Fish Room

A Fish Tour Through Jombie's Tanks

Astatotilapia latifasciata

Here's a cool fish! I obtained 10 small fry at the Extravaganza with the promise that this is a refreshed strain of latifasciata. It's been a few months with this fish and they have put on some nice size. Their colorations hasn't evolved yet, but I really like the dark, clean bars. Today, one of the fish was displaying a fresh yellow and red. I'm really looking forward to spawning these fish in time. Look out for them at auction and bid high! (Seriously, bid high.)

Metriaclima pyrsonotos Albino Red Top Zebras

Okay, here is the showstopper! These zebras are MAGNIFICENT! Every time I walk into the fish room, my eyes are drawn to this tank. I've not had much luck with mbuna in the past, but these are a wonderful exception. These zebras have been bulking up due to their RAVENOUS feeding frenzies. They are a complete joy to feed. Under a pretty cheap light too, these babies pop with their vibrant sheen. I really can't say enough about these mbuna. I can't wait until they breed.

Amatitlania septemfasciata

Here's a cool little Central American cichlid! I obtained 8 of these little fellas at the OCA Extravaganza. After a few months, they have bulked up and I believe they will breed pretty soon. One of the cichlids is displaying some pretty cool coloration. I really like the blue eyes on these guys.

Welcome To My Fish Room

A Fish Tour Through Jombie's Tanks

Mylochromis plagiotaenia "Mvunguti"

Wow! I was lucky to obtain these fish from Josh Cunningham. A group of five, 2 males and 3 females entered my fish room a few months back. These fish are stunning! The males have some serious colors that can be seen across the room. I've really enjoyed keeping this species of *Mylochromis*. I believe a female is holding right now!

Otopharynx heterodon

EASILY one of the best-looking fish I've ever kept. My group is young, but the potential in these males is incredible. My wife was even impressed with him the other day! From the blues to yellows to greens, this is a Malawian that could rival any marine fish in color. I can't wait to see the future of this fish. Just today, I stripped 17 eggs from a hiding females mouth. Look for these at an auction soon!

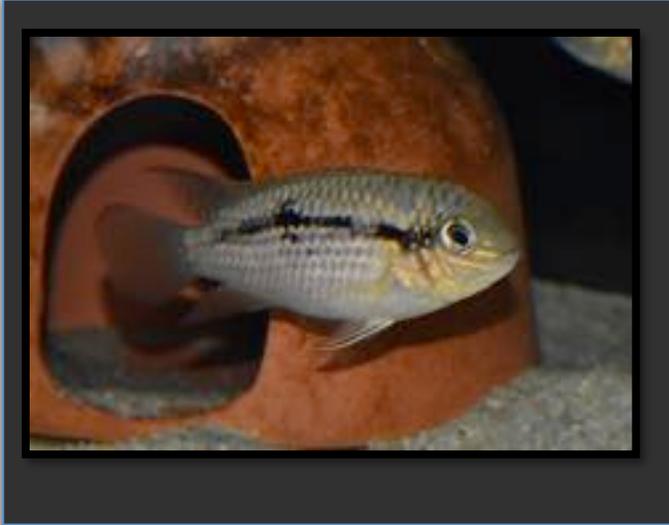

Copidachromis lupingu

After raising those chrysonatus, of course, I now have to bid on any *Copidachromis* that I see at auction. I jumped on these guys and now, I'm just waiting to see those colors pop. I recently moved some *Aulonocara* into the 125 gallon with them to grow out.

Welcome To My Fish Room

A Fish Tour Through Jombie's Tanks

Andinoacara biseriatus

I've kept a few Andinoacara in my tanks. They had different genera, but I guess it's all the same. I obtained ten of these at the OCA Extravaganza last year. For a second I saw my old group of diadema in their picture, so I jumped on these fry. Although not the same, I'm excited to spawn this South American cichlid. I've read their temperament is pretty high, but I have not seen much yet. My biggest male is around 3". I looked forward to spreading this fish around our area.

Corydoras aeneus

After 6 years... I bred this catfish! I don't keep many catfish in my tanks, especially ones that I would devote a tank to for breeding purposes. This cory though developed into such a delight that I could not remove them from their own tank. They've grown into the best-looking aeneus I've ever seen and finally, they bred and I saved the babies. Thanks to some great advice over the years from catfish experts, Phil Aryes and Steve Heinbaugh, I was able to raise a whole tankful of babies. Normally, I witness the lifecycle and sell my fish, but I'll definitely be keeping these.

Aulonocara baenschi

Here's another stunner from Josh Cunningham. I picked these up at the OCA Extravaganza this year and I couldn't be happier. These were my one Peacock of the year before I had to buy the maylandi. After breeding so many different shades of blue Peacocks, I thought I would try something different. While still young, the two males in the group are developing some strong yellow coloration. I can't wait to see their future potential.

Welcome To My Fish Room

A Fish Tour Through Jombie's Tanks

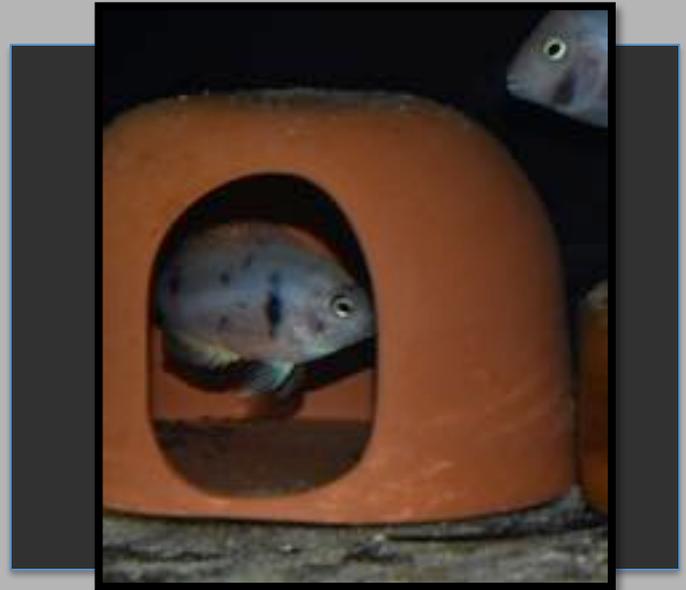

Synodontis petricola

Geez... I've had these cats for a long time too. Bought from Andrew Schock, these little guys have been patrolling my tanks for years now. They really are beautiful, exciting little creatures. I've tried numerous breeding attempts with different pieces and parts from Home Depot, but nothing yet. I have a feeling I'll get it right in year six.

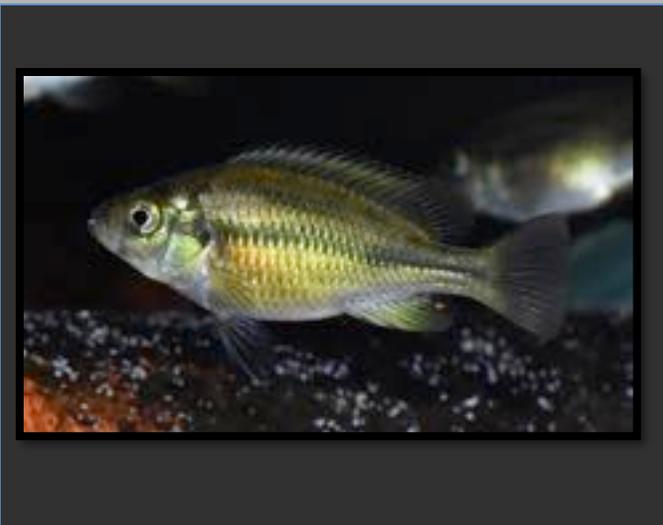

Marbled Convicts

I bought this bag of fish for a dollar and it came with a dollar in the bag! Truly, this fish is worth much more than the dollar. In the group of six, I have two pairs that are all of what one would expect a marbled convict to be - spotted and marked all over. These guys breed like... convicts. I'm raising some fry right now outside the tank and enjoying them breed and parent inside the 75 gallon. It's always nice to go back to where it all began.

Xystichromis sp.

I obtained this these *Xystichromis nuschisquamulatus* at the OCA Extravaganza last year. I really enjoy Vics and I thought I would impress people with the long name. Sadly, I still don't know how to pronounce it and turns out, they most likely are **not** *Xystichromis nuschisquamulatus*. They are still young and not yet showing the coloration I expect from a vic, but I hope to see some more color soon. Even without the color, this is a strikingly golden fish and a fun one to watch. These ten fish want food more than any fish in the fish room. They are gluttonous! I look forward to raising them to see where they go. If you have any information that can help me, please let me know!

Welcome To My Fish Room

A Fish Tour Through Jombie's Tanks

Thoracochromis brauschi

Another stunner! Although young, one of my males just started to color as an adult. Of course, he is the biggest baby and is always hiding. I was able to grab one decent picture to show those sweet yellow, red, and black. I have ten of them in a 75 gallon with the synodontis. I really can't wait until they mature and breed. It should be a real show.

Apistogramma cacatuoides Triple Reds

Here's a frustrating fish. I've had these for a while now and they refuse to breed. I believe I have two pairs but neither one will produce visible eggs or fry. No, I'm not softening the water. No, I don't understand RO. I'll keep them for a few more months and someone else can breed them. They are cute.

Well, thanks for taking a fish tour of my fish room! I wasn't able to get a decent picture of a few species. Also, there are tanks and tubs of fry everywhere. I didn't think that needed pictures.

I'm really enjoying this year in my room. My wife says these are the best fish I've had in years. She likes the colors of Lake Malawi and truly, I do too! It's exciting to see where the hobby takes you. Years ago, you wouldn't see most of these fish in my tanks. I've really expanded my preference in cichlids. There's just so many out there. I want them all! Every time a new speaker presents a new topic, a part of my brain opens up!

Do YOU want to take us on a fish tour of your fish room? Just send me the pics and some small bios. I'll do the rest! Cichlidjom21@gmail.com

THE JIM SMITH ENDOWMENT FUND

Who Was Jim Smith?

Jim Smith was the Membership Chair for the Ohio Cichlid Association from 1991 to 2003.

Jim was not a big man, but because of his obvious physical and mental toughness, fronted by a calm, friendly demeanor, he was loved and respected by friends and co-workers, who referred to him as “The Buffalo.” We in the OCA often called him “Santa,” both because of his looks and because of his gentle and patient way with young children.

What is the Jim Smith Fund?

Following Jim’s passing, in July of 2003, the OCA board knew that something big had to be done to honor Jim’s memory. The lead was taken by OCA board member Dan Woodland. Later that year, the OCA announced the establishment of the Jim Smith Fund. The purpose of the fund is to support research, education and conservation efforts that focus on cichlids and catfish.

How can I support the Jim Smith Fund?

The OCA has fund-raising activities, such as auctions and raffles at meetings and events, to benefit the Jim Smith Fund. When you support these efforts, you help to fund cichlid and catfish research, education, and conservation projects, and carry on the good work that Jim Smith started many years ago. You can donate fish or aquarium goods at any event, including Sunday’s auction. Just right “Donation” on the item, and include your name, if you want. You could also make a cash donation directly to the OCA. Any OCA Board Member can take your donation in person, or you can donate directly at paypal@ohiocichlid.com.

How can I apply for a Jim Smith Fund grant?

If you have a project in mind that shares all or some of the goals of the Jim Smith Fund, email JSF Chair Lew Carbone at lewcarbone@gmail.com. You will be added to the list of invitees that will be notified when the next application period begins.

Who are recent Jim Smith Fund grant recipients?

Ryan Greenway, a PhD candidate at Kansas State University, was awarded a \$1,000 Jim Smith Fund grant at the 2017 Extravaganza. Ryan is studying the interrelatedness of, and possible hybridization between, 3 species of Thorichthys, living in 4 different areas of the Grijalva River Basin, in Mexico. He will be using the funds to pay for genetic testing. Anton Lamboj, a colleague of Ryan's PhD advisor, Dr. Michael Tobler, accepts the award on his behalf.

Ad Konings recently discovered that the *Tropheus duboisi* "Maswa" is virtually extinct in Lake Tanganyika, due to over-collecting. In 2017, the Jim Smith Fund gave a \$500 grant to the Stuart Grant Fund, earmarked for obtaining a large group of already captive "Maswa" adults. The intent is to begin a breeding program with the goal of eventually re-establishing a wild population in their original home range. Ad accepts the award, and will oversee the project.

Who are recent Jim Smith Fund grant recipients?

At this recent Extravaganza, the Ohio Cichlid Association announced the winner of the 2018 Jim Smith Endowment Fund grant. Jim Smith was a long-time and highly-regarded Membership Chair of the OCA, who passed away in 2003. Later that year, the Jim Smith Fund was established in his memory. The Jim Smith Fund solicits proposals for research, education or conservation projects that deal with cichlids or catfish. Each year, the OCA board votes to determine the best project or projects from the list of applicants, taking in consideration the current balance in the fund.

On November 17, 2018, the Ohio Cichlid Association announced that a team of researchers from McGill University, in Canada, and University of Pará, in Brazil, has won the Jim Smith Fund grant for 2018, and will be awarded \$1700. The team is made up of Oliver Lucanus (McGill), Dr. Margaret Kalacska (McGill) and Dr. Leandro Sousa (Pará).

The driving force behind the team's project is that the incredible fish diversity of the Volta Grande section of the Rio Xingu, in Brazil, is gravely threatened by a variety of human activities. Part of what makes this diversity possible is the unusual and complex bottom structure, which features many different types of rocks, crevices, caves and other features, each used by certain species. This team plans on using photogrammetry (a method of 3-D digital mapping that uses hundreds of photos) to study the bottom of this part of the Rio Xingu.

The idea is to be able to use the data from this mapping, along with 3D printing, to make artificial stand-ins for that section of the Xingu's substrate. These printed structures will be installed in aquariums, ponds or man-made streams. The goal is to get the more difficult-to-breed Xingu species to feel at home enough to reproduce, thereby keeping these species alive in the hobby, even if they go extinct in the wild.

We wish **Oliver, Dr. Kalacska and Dr. Sousa** the best of luck in carrying out their project. We look forward to a personal update on the project's status when Oliver visits to speak at the 2019 Extravaganza, our 25th annual show.
